Overall Timetable

Week	Intended Hours	Actual hours	Other Deadlines	Notes
1-7th March	5	5		Week was primarily focused on deciding broadly how things would be done as well as allocating work.
8-14th March	30	35.5	ISA Lab	This week was focused on getting things up and running, originally it was intended to have the basic features all implemented by this point but this was missed by a day as some things took longer than expected.
15-21st March	50	68		This week was started off with finishing the full basic features, after this large amounts of time was spent implementing intermediate features (In particular arrays!). By the end of the week the intermediate compiler had been completed.
22-28th March	30	27	Communications Lab Report Control Lab Report Information Processing Coursework	This week had the most time pressure associated with it due to the upcoming deadline as well as various other courseworks. Focus was largely on trying to implement the most relevant advanced features, and accepting that not every single advanced feature would be implemented.
